## Restoration

Following the completion of splice vault and duct bank installation, excavated areas will be restored.

## **Cable Installation and Splicing**

- 1. Underground cable comes on trucks specifically designed for the installation of underground cable. Crews will pull cable from one splice vault to another along the project route.
- 2. Crews will set up a climate-controlled environment at each splice vault location to splice the underground cables together. This activity is continuous.

  PSEG LONG ISLAND

## **Underground Construction**

Crews will ready roadways and install an underground duct bank in which the new cable will be installed. This may include trenchless installation methods.

## **Vault Installation**

Underground vaults will be installed at intervals along the route to splice, or tie together underground cables.
